

Project 3: Simple Blog Creation using Django Web Framework

You need to create Simple Blog using the Django web framework. You need to provide a straightforward platform to create, manage, and share your blog posts.

You can include following features:

- Implementation of a secure user registration and authentication system.
- Differentiated user roles, including authors and readers, each with specific permissions.
- Development of an intuitive interface for effortless creation and management of blog posts.
- Option to categorize and tag blog posts for better organization.
- Categories and tags help readers discover content relevant to their interests.
- Integrated comment section for readers to engage with blog posts.
- Authors can respond to comments, fostering a sense of community.
